ABOUT ME

I am a Computer Engineering student at Abdullah Gül University, focused on the intersection of Artificial Intelligence and Cybersecurity. On one hand, I build RAG and agent-based systems on top of large language models and apply them to cybersecurity problems such as threat intelligence and log analysis; on the other, I'm interested in the security of AI systems themselves (adversarial attacks, model robustness). I closely follow developments in the field and put what I learn into practice through real projects rather than leaving it in theory.

EXPERIENCE

LIMOS-CNRS, Université Clermont Auvergne — Research Intern | Jun 2026 – Jul 2026

Supervisor: Prof. Gérard Chalhoub

- Developed a deep learning-based Network Intrusion Detection System (NIDS): set up a three-machine testbed (traffic generator, Zeek sensor, attacker machine) and collected realistic traffic data.
- Trained Dense Autoencoder and Variational Autoencoder (VAE) based anomaly detection models; the VAE model reached ~0.92 AUC across multi-seed tests.
- Ran a comprehensive experiment series across 9 contamination levels × 20 seeds to measure model robustness; incorporated findings (K1/K2, O1–O7) from an independent methodology audit.

PROJECTS

Agent_Jury — Multi-Agent AI System | Python · Docker · OpenAI API · Solidity

- Built a backend system that chains three LLM agents in sequence (Feasibility, Innovation, Risk) to evaluate and score technical proposals end-to-end.
- Added a multi-provider fallback mechanism so the system keeps running if one LLM provider goes offline.
- Packaged the entire system with Docker Compose, removing the need for manual service wiring.
- Used OpenZeppelin UUPS contracts to store results on-chain, with ECDSA signature verification on the Python side.
- Added baseline security measures: prompt injection detection, input sanitization, and structured logging.

Flaneur Bakes — Café Management System | Python (Flask) · SQLite · pywebview

- Built an end-to-end inventory, recipe, and sales tracking system for a café: ingredient/product/recipe management, automatic stock deduction, supplier tracking.
- Added a sales/revenue dashboard with date-range filtering using Chart.js.
- Turned it into a standalone macOS app using pywebview for a native desktop experience.

TECHNICAL SKILLS

Languages: Python · Java · Solidity · Dart

Python Ecosystem: NumPy · Pandas · PyTorch · TensorFlow · FastAPI

Cybersecurity: NIDS · Zeek · Wireshark · tcpdump · SIEM · NIST CSF

AI / LLM: RAG · LangChain · multi-provider LLM integration

DevOps & Tools: Docker · Docker Compose · Git · GitHub · Linux CLI

Blockchain: OpenZeppelin (UUPS) · ECDSA · smart contract integration

Other: REST API design · JSON · Flutter (mobile)

CERTIFICATIONS & TRAINING

- Google Cybersecurity Certificate — Google
- Supervised Machine Learning — IBM Certificate
- Unsupervised Machine Learning — IBM Certificate
- Deep Learning & Neural Networks — IBM Certificate
- DELFI B2 — Diplôme d'Études en Langue Française, France Éducation internationale

EDUCATION

B.Sc. Computer Engineering | Oct 2023 – Present

Abdullah Gül University, Kayseri, Turkey

LANGUAGES & INTERESTS

Languages: English · French · Turkish

- Cybersecurity & Network Intrusion Detection
- Large Language Models (LLMs), RAG & Agentic Systems
- Security of AI (Adversarial Robustness)
- Machine Learning & Deep Learning
- MLOps & AI System Design
